

UVM SEED TEAM 5 HIL SCHEMATIC

Alec Benedict, Kendall Meienhofer, Janessa Green, Emily Ninestein

April 2025

1 HIL Schematic

Figure 1: HIL System Overview

To perform a HIL simulation, the three components shown in Figure 1 must be physically connected using proper wiring, as outlined in the OPAL-RT User Manual. The simulation is set up on the host PC by importing the required data files from PSS/E into RT-LAB, along with the inverter model developed in Simulink. The Arduino microcontroller connects to the OPAL-RT system via a DB-37 cable, with appropriate wiring to the designated ports.

The project files provided in the GitHub repository, together with the setup shown in Figure 1, allow this HIL simulation to be replicated.
